

## Mental Differences of Men and Women.

That men and women are mentally alike is as untrue as that they are alike bodily. Just as certainly as they have physical differences, similarly related to the respective parts they play in the maintenance of the race, so certainly have they mental differences, similarly related to their respective shares in the rearing and protection of offspring. To suppose that along with the likenesses between their parental activities there do not go unlikenesses of mental faculties is to suppose that here alone in all nature there is no adjustment of special powers to special functions. Two classes of differences exist between the psychic, as between the physical, structures of men and women, which are both determined by the same fundamental need—adaptation to the paternal and maternal duties. The first set of differences is that which results from a somewhat earlier arrest of individual evolution in women than in men, necessitated by the reservation of vital power to meet the cost of reproduction. Whereas in man individual evolution continues until the physiological cost of self-maintenance very nearly balances what nutrition supplies, in woman an arrest of individual development takes place while there is yet a considerable margin of nutrition; otherwise there could be no offspring. Hence the fact that girls come earlier to maturity than boys. Hence, too, the chief contrasts in bodily form—the masculine figure being distinguished from the feminine by the greater relative sizes of the parts which carry on external actions and entail physiological cost, the limbs, and those thoracic viscera which their activity immediately taxes. And hence, too, the physiological truth that, throughout their lives, but especially during the child-bearing age, women exhale smaller quantities of carbonic acid, relatively to their weights, than men do; showing that the evolution of energy is relatively less as well as absolutely less. This rather earlier cessation of individual evolution thus necessitated, showing itself in a rather smaller growth of the neuromuscular system, so that both the limbs which act and the brain which makes them act are somewhat less, has two results on the mind. The mental manifestations have somewhat less of general power or massiveness; and beyond this there is a perceptible falling short in these two faculties, intellectual and emotional, which are the latest products of human evolution—the power of abstract reasoning and that most abstract of the emotions, the sentiment of justice—the sentiment which regulates conduct irrespective of personal attachments and the likes or dislikes felt for individuals.—*Herbert Spencer, in Popular Science Monthly.*

## An Indian Princess.

It was a favorite theory of Mr. Mill that women have a special aptitude for governing. He would have found some confirmation of this notion in the little State of Bhopal, in Central India. Its ruler is a woman; and she is pronounced by the *Times* of India "one of the most enlightened administrators among our native feudatories." She has introduced important changes for the better government of her subjects. Arrangements have been made which prevent defendants in a civil suit from fraudulently concealing their property, and thus evading payment of decrees passed against them. Dishonest insolvents may now be punished by attachment and criminal prosecution; and, to prevent extravagance, money lenders have been cautioned not to advance loans to persons of limited means. An extra judicial establishment, formed at a considerable annual cost, clears off long pending cases, and the police has been reinforced from the regular army. Fairs have been established, and roads and bridges constructed, and the postal system largely developed. The Begum (princess) by no means shirks the responsibility of her office. She makes tours through all the districts of the State, and finds, to use her own words, that "they act as a check on dishonest officials, and afford a chance to ryots and others, who may have grievances to be redressed, to present their petitions in person." This is government in its most primitive, and perhaps not least effective, form. The camp followers of her highness were in the habit of obtaining supplies from tradesmen on credit. As the creditors had some difficulty in recovering the price of articles, this concessionary princess has given orders "that supplies are not to be furnished to any one except for cash payments." The Begum's daughter, who is heir-apparent, is not allowed to waste too much time in frivolous amusements. Three hours are given up to "recreation," but the rest of the day is spent in study and in the hearing of "ordinary cases." The latter employment is supposed to give her some insight into official work, and to prepare her for future duties. In the evening, if the young princess does not go out for a drive, she occupies herself with needlework.

## Brutal Murder of a Catholic Bishop.

Information has been received of the horrible murder of Bishop Devere, at St. Pierre, near Newfoundland, on Oct. 13. The deed was perpetrated in a small apartment adjoining the sacristy of the Church of St. Jean d'Arc, while praying before the performance of his daily mass. He was seized by two men, and mortally wounded with a stab of a sheath-knife, which was left behind by the assassins. They escaped by means of a passage-way which leads from the sacristy to the convent, and through which the nuns were accustomed to enter. An acolyte getting admission to the Bishop's oratory and bringing in a message to him, first led to the discovery of the murder. Hearing his moans he ran to the scene, and finding the doors locked the sacristy was broken open and the Bishop was found stretched on the floor, covered with blood and gasping for breath. He ran at once for Father Lehoucq, the Bishop's confessor, who was readily at hand. Finding him unable to speak or tell the cause of his condition, he administered extreme unction and absolution, but the Bishop was dead before he could reach the communion. Emil Pelletier, the Bishop's cousin, and a rone of the most dangerous type, was arrested for the murder. The most intense excitement pervaded the settlement of St. Pierre on the day succeeding the assassination. It is reported one Louis, a blacksmith, was Emil Pelletier's accomplice.

—The most useful lesson in the school of life is that which teaches us to be content.

## THINGS WORTH REMEMBERING.

—Protecting Orchard Trees.—Mulch the roots with straw or coarse manure and litter, being careful, however, not to throw it immediately about the bodies of the trees. No matter how heavily you mulch. Then to protect the bodies of the trees from sun and frost alternately, as well as from rabbits, bind them about with corn stalks stripped of the foliage.

—Cocoanut Cake.—One and one-half cups sugar, one-half cup butter, whites of three eggs, one teaspoon milk, three teaspoons flour, one teaspoon soda, one teaspoon cream-tartar, one grated cocoanut, leaving half a teaspoonful to sprinkle over the top, either before baking or just after being, as is preferred. Any kind of baking-powder may be substituted for the soda and cream-tartar.

—A new way of preserving autumn leaves is given as follows: Iron them fresh with a warm (not hot) iron, on which some spermaceti has been lightly rubbed. This method preserves perfectly their lovely tints, and gives a waxy gloss which no other one secures. The process is very rapid and very agreeable, and no lady who has ever tried the tedious and uncertain experiment of pressing will ever again resort to it after once trying this new and better way.

—Pie made of Cold Roast Beef.—Cut about half a pound of cold underdone beef into small pieces; add pepper and salt to taste. Line a deep pie-dish with paste; put in a layer of meat. Over this strew some finely-minced onion; dredge flour over it, then add another layer of meat, onion and flour, till the pie is full. Pour in a little water, and on the top layer lay some small lumps of butter. Cover the top with paste, leaving a hole in the center. Bake it, and serve with oyster-sauce; or, in the place of the onions, layers of oysters may be substituted.

—The best time for painting the exterior of buildings is late in the autumn or during the winter. Paint then applied will endure twice as long as when applied in early summer, or in hot weather. In the former it dries slowly and becomes hard, like a glazed surface, not easily affected by the weather, or worn by the beating of storms. But in very hot weather the oil in the paint soaks into the wood at once, as into a sponge, leaving the lead nearly dry, and nearly ready to crumble off. This last difficulty, however, might be guarded against, though at an increased expense, by first going over the surface with raw oil. By painting in cold weather, one annoyance might certainly be escaped, namely, the collection of small flies on the fresh paint.—*The Technician.*

—The only requisites for preserving fresh eggs are to protect them from contact with the air, and to keep them in a cool, moist place. Large dealers keep them for several weeks, while they are plentiful, so as to sell them when scarce, by a process called fuming. The eggs are immersed in very strong lime water, or milk of lime, and are then known as limed eggs, and are so sold in the market at a very small reduction in price from that of fresh eggs. A keg, barrel or jar would answer to keep them in. Eggs have been kept for months perfectly good, by simply smearing the shells with linseed oil and placing them upon their ends in sand so that three-fourths of their surface was exposed. At the end of the test they had lost only three per cent. of their weight and were equal in flavor to fresh eggs. For family use, eggs might be thus prepared, a layer of them placed upon their ends in sand at the bottom of the box, when lime sand might be poured upon them, and other layers put in the same manner. We have kept eggs thus season until after the New-Year by simply filling a net, and tying them up and hanging them in a cool cellar, changing the mesh upon which they were hung every day.—*N. Y. Times.*

## Fruit Culture.

It is very strange that people will continue to grow trees year after year without any fruit, and yet praise their system as the best possible one against anything else that can be done. We have contended for years that fruit culture will never be successful until some very different system than that usually practised shall be adopted. The ground must be so dry to grow good fruit, that water will not be twenty-four hours in summer (in winter it is of no consequence) without passing away; the fibrous roots must be kept as near the surface as possible and kept shaded from the intense heat of summer. Then they must be kept highly fed by occasional dressings of surface manure. These are the principles without which, depend on it, American fruit culture will, with occasional exceptions, always be a failure.

The planting of the pear, apple, plum and cherry will soon be in season; peaches, apricots and grape vines, except those of the Potomac being for the most part left till spring. Choose a dry piece of ground. If not naturally dry, it is best to throw the earth up into banks or ridges and plant on them. This is cheaper and better than under-draining. In planting, if the roots appear deep, cut away some of the deeper ones, and shorten some of the top of the tree at the same time. This is particularly true of dwarf pears which are often grafted on rather long quince stocks. Cut all away of the quince root but about six inches, and if this should be found to leave few roots, cut away the top correspondingly. Most of the failures with dwarf pears comes from bad quince roots, so deep in the ground the lower parts decay, and this decay gradually communicates upward until the whole system becomes diseased. The more treacherous the sub-soil the more necessary is it to attend to this matter. We spoke of pruning in proportion to injury. It will be found that all trees are a little injured by removal, therefore all trees should be a little pruned at transplanting.

Trees that have long stems exposed to hot suns, or drying wind, become what gardeners call "hide-bound." That is, the old bark becomes indurated—cannot expand, and the tree suffers much in consequence. Such an evil is usually indicated by grey lichens which feed on the decaying bark. In these cases a washing of weak lye or of lime-water is very useful; indeed, where the bark is healthy, it is beneficial to wash the trees, as many eggs of insects are thereby destroyed.

Whitewash is frequently resorted to by farmers; but the great objection is its unsightly appearance—the result is otherwise good. The great objection to washes formerly was, that the pores of the bark were closed by them—this was on the supposition that the bark was alive, but the

external bark of most trees has been dead years before the time of application; and "the breathing," if so the operations of the pores can be called, is through the crevices formed in the old bark by the expansion of the growing tree, by which the living bark below has a chance of contact with the air. No matter what kind of coating is applied to the bark of a tree, it will soon crack sufficiently, by the expansion of the trunk, to permit all the "breathing" necessary.—*Gardener's Monthly.*

## A REMEDY THAT WILL CURE CONSUMPTION

Will those who have been Long Afflicted with Consumption take Courage!  
PLEASE READ THE FOLLOWING:

COLUMBIA, HENRY CO., Alabama, March 8, 1873.  
MRS. J. N. HARRIS & CO., Cincinnati, Ohio.  
DEAR SIR:—I want you to send me six bottles of Allen's Lung Balm. Since last May I have bought and taken about twenty bottles of the Lung Balm, for a disease of the Lungs of THIRTEEN YEARS' STANDING. Before that time I have bought and used nearly every Lung Balm recommended, and your Lung Balm is the only thing that has given me permanent relief. I believe that it saved my life last spring, when I commenced its use. I do not expect anything will cure me entirely, but the Balm keeps me up so that I can attend to business. It gives me immediate relief, and I am greatly improved in general health. I remain gratefully yours,  
D. D. POOL.

What better proof of a good remedy for Consumption do you want?

MRS. J. N. HARRIS & CO., Cincinnati, Ohio, March 24, 1873.  
GENTS:—Last December I was taken with a severe cough, and was confined to my room. But as I sat meditating on the names of different articles I had in my store for coughs, I thought I would try a bottle of Allen's Lung Balm, of which, at that time, I had not sold a bottle. I took a bottle and opened it, and commenced using with the most happy results, and was soon entirely cured of my cough; since then I have recommended it to a number of friends, and I have yet to find a single instance in which it has failed. I consider it a complete cough-cure.

O. P. SNYDER, Druggist.  
The Lung Balm never fails to do good for those afflicted with a cough.  
It is harmless to the most delicate child.  
It contains no opium in any form.  
It is sold by Medicine-dealers generally.

CAUTION.  
Be not deceived. Call for ALLEN'S LUNG BALM, and take no other.  
27 Directions accompany each bottle.

J. N. HARRIS & CO., Cincinnati, Ohio,  
PROPRIETORS.  
SOLD BY ALL MEDICINE DEALERS.

WORK FOR ALL!  
MEN, WOMEN, BOYS OR GIRLS can make good wages during the fall and winter months by cashing for the

St. Louis Midland Farmer.  
the handsomest and cheapest Agricultural Monthly in this country. Complete outfit, with full particulars, sent for 25 cts. Address the publishers, G. W. MATTHEWS & CO., 212 North Sixth Street, St. Louis, Mo.

DR. WHITTIER, 617 N. CHARLES ST., ST. LOUIS, MO.  
Largest on-hand, and most complete assortment of the Age's necessities, at wholesale and retail prices.

Manufacturers of non-conducting covering for steam pipes, boilers and hot blast pipes; produces a very LARGE SAVING IN FUEL. Guaranteed to be the best material for the purpose now in the market.  
Sold by the Barrel, with full instructions for applying. Pipes covered by contract or foot, and warranted. For further information send for Circulars containing Eastern and St. Louis references.  
WESTERN BRANCH Office, No. 320 Chestnut St.,  
ST. LOUIS, MO. Factory, No. 717 N. Ninth St.,  
C. W. THOMAS, President.

## The Sun.

NEW YORK, 1873-1. WEEKLY, SEMI-WEEKLY, AND DAILY.

THE WEEKLY SUN is too widely known to require any extended recommendation; but the reasons which have already given it fifty thousand subscribers, and which will, we hope, give it many thousands more, are briefly as follows:

It is a first-rate newspaper. All the news of the day will be found in it, condensed when unimportant, at full length when of moment, and always presented in a clear, intelligible, and interesting manner.

It is a first-rate family paper, full of entertaining and instructive reading of every kind, but containing nothing that can offend the most delicate and scrupulous taste.

It is a first-rate story paper. The best tales and romances of current literature are carefully selected and legibly printed in its pages.

It is a first-rate agricultural paper. The most fresh and instructive articles on agricultural topics regularly appear in this department.

It is an independent political paper, belonging to no party, and wearing no color. It fights for principle, and for the election of the best men to office. It especially devotes its energies to the exposure of the great corruptions that now weaken and disgrace our country, and threaten to undermine republican institutions altogether. It has no fear of knaves, and asks no favors from their supporters.

It reports the fashions for the ladies, and the markets for the men, especially the cattle markets, to which it pays particular attention.

Finally, it is the cheapest paper published. One dollar a year will secure it for any subscriber. It is not necessary to get up a club in order to have THE WEEKLY SUN at this rate. Any one who sends a single dollar will get the paper for a year.

THE WEEKLY SUN.—Eight pages, fifty-six Columns. Only \$1.00 a year, no discounts from this rate.

THE SEMI-WEEKLY SUN.—Same size as the Daily Sun, \$2.00 a year. A discount of 20 per cent. to Clubs of 10 or over.

THE DAILY SUN.—A large four page newspaper of twenty-eight Columns. Daily Circulation over 120,000. All the news for 2 cents. Subscription price 50 cents a month, or \$6 a year To Clubs of 10 or over, a discount of 20 per cent.

Address, "THE SUN," New York City.

Dr. J. Walker's California Vinegar Bitters are a purely Vegetable preparation, made chiefly from the native herbs found on the lower ranges of the Sierra Nevada mountains of California, the medicinal properties of which are extracted therefrom without the use of Alcohol. The question is almost daily asked, "What is the cause of the unparalleled success of VINEGAR BITTERS?" Our answer is, that they remove the cause of disease, and the patient recovers his health. They are the great blood purifier and a life-giving principle, a perfect Renovator and Invigorator of the system. Never before in the history of the world has a medicine been compounded possessing the remarkable qualities of VINEGAR BITTERS in healing the sick of every disease man is heir to. They are a gentle Purgative as well as a Tonic, relieving Congestion or Inflammation of the Liver and Visceral Organs, in Bilious Diseases.

The properties of DR. WALKER'S VINEGAR BITTERS are Aperient, Diaphoretic, Cathartic, Nutritious, Laxative, Diuretic, Sedative, Counter-Irritant, Sudorific, Alterative, and Anti-Bilious.

CONSUMPTION  
And Its Cure.

WILLSON'S  
Carbolated Cod Liver Oil

Is a scientific combination of two well-known medicines. Its theory is first to arrest the decay, then build up the system. Physicians find the doctrine correct. The really startling cures performed by Willson's Oil are proof.

Carbolated Cod Liver Oil arrests Decay. It is the most powerful antiseptic in the known world. Entering into the circulation, it at once grasps with corruption, and decay ceases. It purifies the sources of disease.

Cod Liver Oil is Nature's best antidote in resisting Consumption.

Put up in large wedge-shaped bottles, bearing the inventor's signature, and is sold by the best Druggists. Prepared by  
J. H. WILLSON, 83 John St., New York.

WILSON, HINKLE & CO., 127 Walnut St., St. Louis.  
WESTERN AGT'S: RICHARDSON & CO., St. Louis.

CRAB ORCHARD SALT

Has all the medicinal properties of Crab Orchard Springs of Ky. Has no equal in Nausea, Headache, Dyspepsia, Constipation, Biliousness, and all the ills incident to hot weather. Best laxative in the world. Sold by all Druggists.

\$5 to \$20 per day! Agents wanted! All classes of working people, of either sex, young or old, make more money at work for us in their spare moments or all the time than at anything else. Particulars—\$37,000 a year. Send stamp to A. H. BLAIR & CO., St. Louis, Mo.
